

Private Company Profile

Founded in 2000, SkyCross is a global wireless company, based in Melbourne, FL, that provides antenna-centric radio-frequency (RF) solutions for the mobile phone, home entertainment and computing industries. The company's patented technologies give manufacturers the freedom to design and deliver advanced mobile voice, data, video, and location services to a wide range of wireless devices through:

- Sleek designs with longer battery life, increased performance (high end) and reduced cost (low end)
- Any combination of applications (voice, data, video) for any device (phones, smartphones, data cards/dongles, laptops, personal electronics, etc.)

SkyCross' differentiated technology solutions (iMAT-Isolated Mode Antenna Technology, Band Switching, Tuning, and Antenna Optimized RF Modules) improve and extend network performance at the device level. Multi-band/multi-mode/multi-function antennas are found in a wide range of mobile platforms including slim mobile handsets, smartphones, notebook computers, PC cards including Express34, USB dongles, personal media players, ultra-mobile PCs, and wireless earphones. SkyCross is the only company offering a complete solution offering superior technology, a wide array of antenna products and significant RF expertise.

SkyCross is ISO 9001 certified and offers a full range of solutions from its facilities in the U.S.; Seoul, South Korea; and Shenzhen, China. The Company offers solutions such as wireline and wireless, business/strategic planning, infrastructure equipment design/production, and service provider network operations to help its customers rapidly develop slim, differentiated wireless device designs at compelling price points.

Led by Dr. Chris Morton, CEO, who has more than 25 years of entrepreneurial and corporate leadership experience in the communications infrastructure industry, SkyCross has attracted major customers, partners and a seasoned management team. We believe SkyCross is well positioned in the global marketplace as the Company continues to gain traction with leading customers in the exploding wireless mobile industry. In addition, SkyCross addresses numerous high growth markets such as Smart Phones, PC Cards, USB Dongles, embedded modems, Personal Navigation Devices, Portable Media Players, Home Entertainment Networking, etc. The Company's total addressable market should grow from 1.5 billion units in 2008 to 1.8 billion units in 2010. As mentioned, SkyCross is poised for continued success with a strong management team, considerable market footprint, and solid intellectual property.
